

Django and XMPP - Writing a real-time web app

(a.k.a How we are writing
wikipediagame.org)

What is Wikipedia Game?

Get from article A to article B, by clicking as few links as possible, as fast as possible.

We played against friends in the comp lab...

(Photo credit: <http://www.flickr.com/photos/jiscinfonet/351465890/>)

What if it was a real mutli-player online game?

wikipediagame.org

Multi-user game

Real-time click count everyone sees

Real-time chat

Community ranking.

More features to come...

Combine 2 great flavors

MVC, admin interface, excellent existing drop-in apps.

The web wants to be more *realtime*

How do you mix XMPP into the web browser (HTTP only?!)...

Tools from stanziq.com - these guys rock!

STR<>PHE

Strophe - XMPP javascript client

<http://code.stanziq.com/strophe/>

PUNJAB

Punjab - HTTP<->XMPP connection manager

<http://code.stanziq.com/punjab>

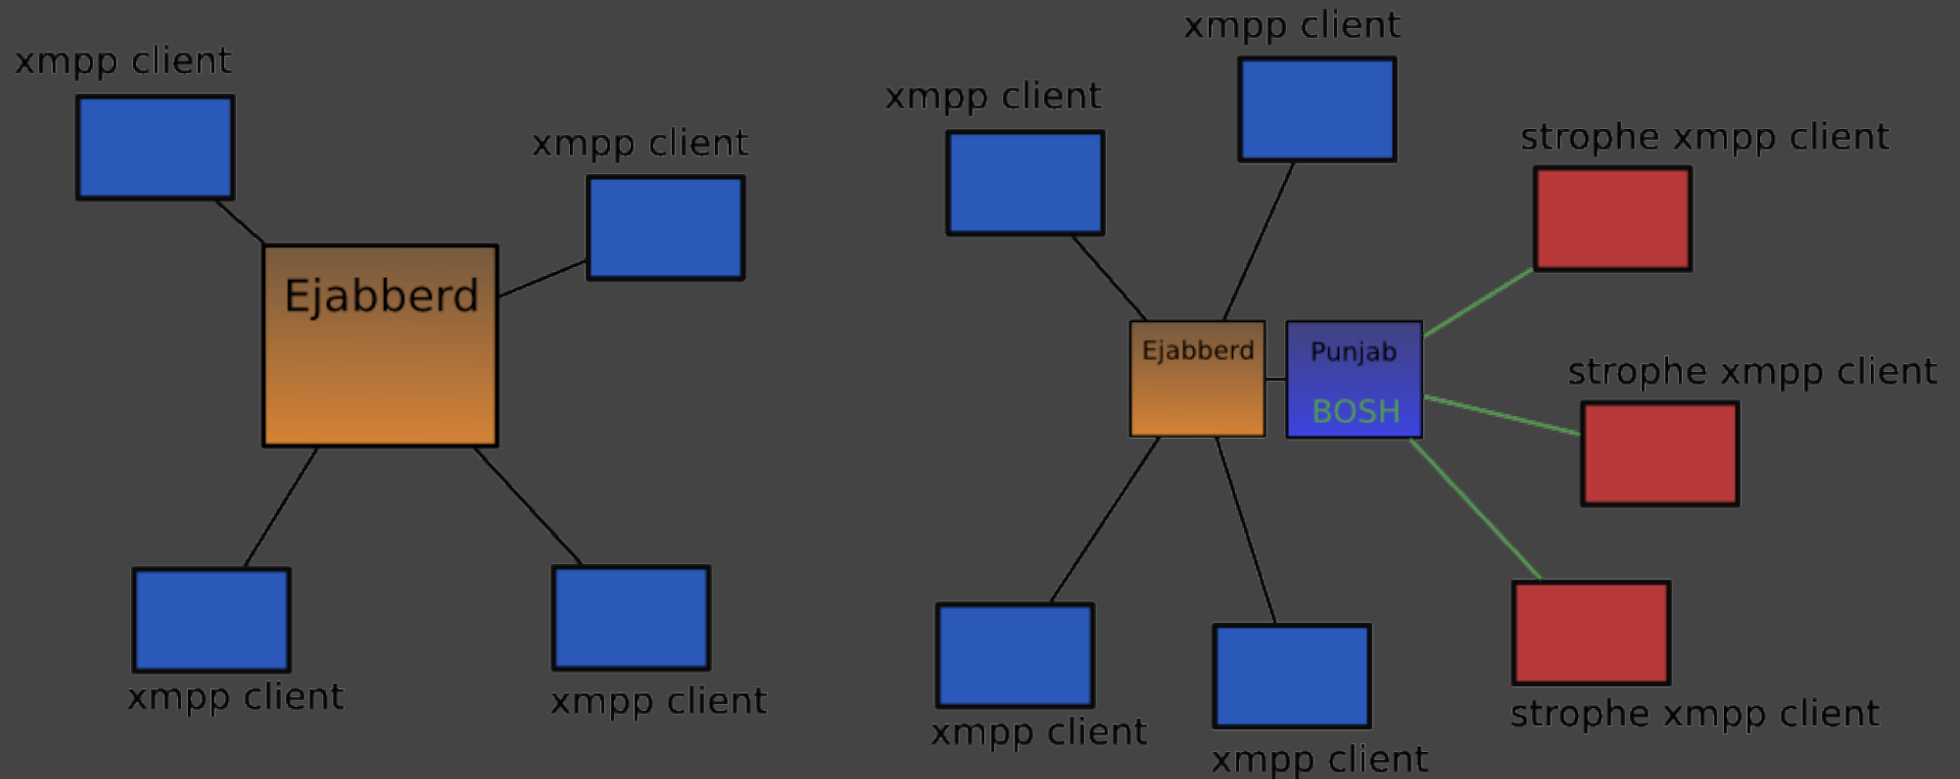

The logo for Speeqe, featuring the word "speeqe" in a bold, white, lowercase sans-serif font. The letters are contained within a black speech bubble shape that points to the right.

chat now!

Speeqe - Web based group chat app - learn a lot

<http://code.stanziq.com/speeqe>

BOSH, Comet, XMPP

XMPP Multi User Chat is cool.

BOSH: Comet long polling technique = push capabilities in browser

BOSH + Strophe = XMPP in the browser!

Django fits in...

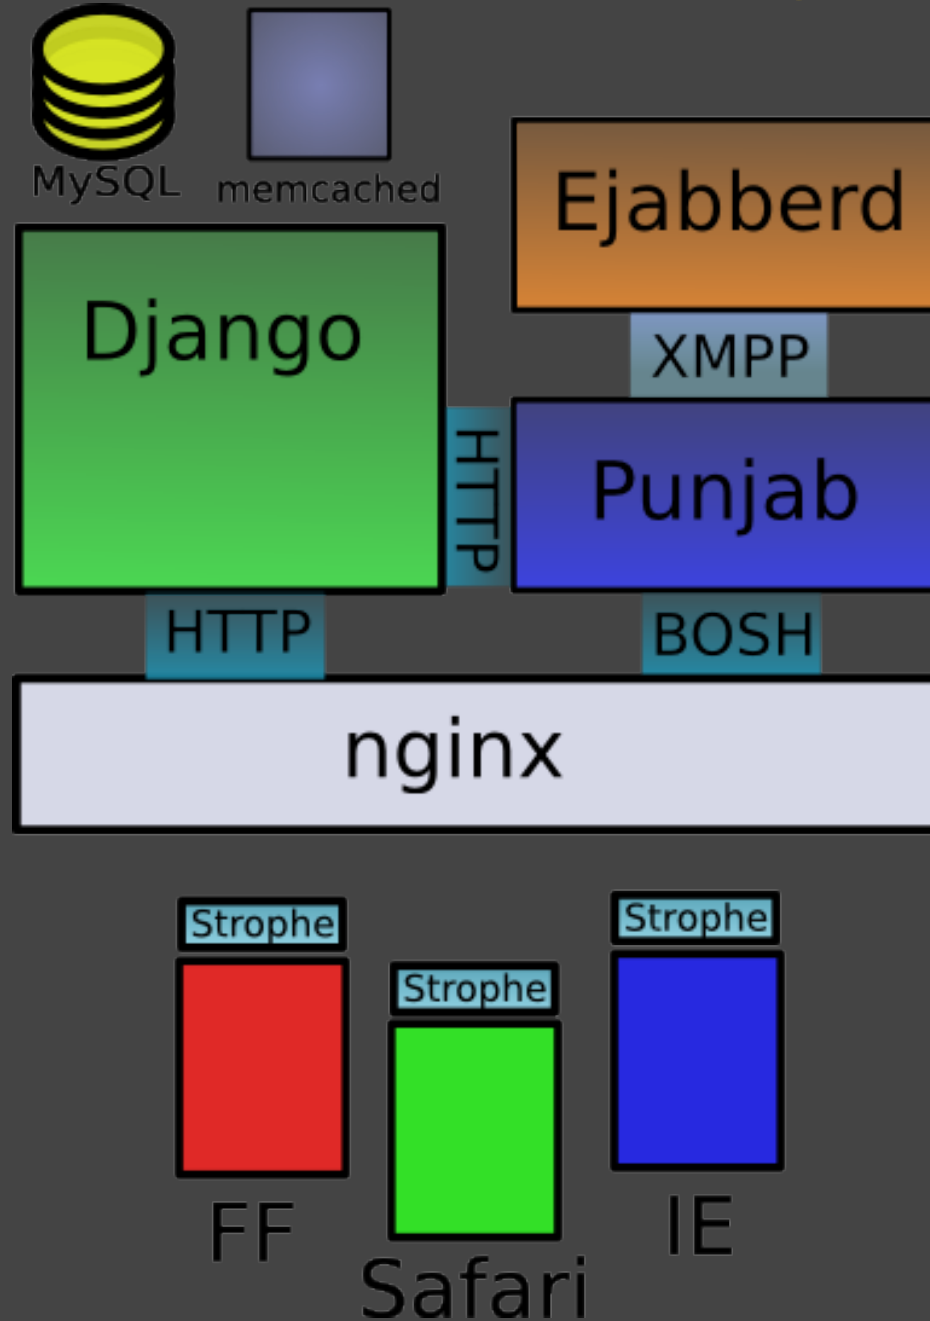

User management using standard Django wonderfulness

Jabber accounts can also be managed from Django (Python!)

XMPP authentication via *session attachment* through Punjab

Users only authenticate once, even though they are actually logging into two entirely distinct systems: django & ejabberd.

Architecture of wikipediagame.org

Thanks!
